HSS SUPERSTRUCT

Valmont's HSS SuperStruct custom tube sections are built to fit for those applications that require oversized square, rectangle and custom-shaped HSS tube sections. Produced to ASTM A1065 in square and rectangles up to 60" and in wall thicknesses up to 1", HSS SuperStruct offers architects and design engineers flexibility beyond any other HSS tube supplier. With our ability to produce in fractional increments and custom shapes, there are thousands of different size and wall thickness combinations available!

End uses for HSS SuperStruct include stadium and building construction, pedestrian bridges, tunnel construction, sign structure and many other architectural and industrial applications.

HSS SuperStruct benefits include:

- All sections are made in the USA
- Order quantities as low as one piece can be produced
- Lower transportation, handling and erection costs than other structural shapes
- High strength to weight ratios, with less finishing costs than wide flange
- Visually appealing compared to other structural shapes such as wide flange W shapes and I-beams
- Easy fabrication, painting and welding of attachements

For additional size information, please visit our online product catalog at hsssuperstruct.com.
